

EU-iNSPIRE

Dear Reader,

Recent events show that autonomous systems don't always need advanced attackers to face disruption. In San Francisco, coordinated ride requests reportedly sent around [50 Waymo robotaxis](#) to the same dead-end street at once.

What may have started as a prank highlights a serious point: coordinated user behavior and edge cases can create real operational impact. As autonomous technologies expand, resilience against misuse and systemic stress becomes essential — reinforcing the need for cross-industry cybersecurity education that connects software, safety, operations, and governance.

UPCOMING EVENT - ACADEMIC STANDARDS DAYS IN NICOSIA (CYPRUS)

EU-iNSPIRE is participating in Cyprus at the [Academic Standards Days](#) (ASD), represented by the [Cyprus Organisation for Standardisation](#) (CYS), an EU-iNSPIRE program beneficiary.

The event will open with a plenary on standardization's role in safety, innovation, international trade, and sustainable development, followed by three breakout sessions:

From Ideas to Standards (research and innovation), *Start Smart: From Startup to Standout* (entrepreneurship), and *Boosting Industry Advantage* (industry applications).

The Cyprus Organisation for Standardisation will participate in the research and innovation session with focus on how standardization bridges the gap between academic outputs and real-world adoption, turning laboratory findings into scalable, market-ready solutions.
